(54) Title: ENDCAP FOR A SAMPLING DEVICE

(57) Abstract: A tip portion or endcap for a lancing device having a non-circular opening to provide tension and pressure upon the patient's skin before and/or during lancing of the skin for sample collection. In example embodiments, the endcap is shaped to prevent the lancet body from sticking within the hole or passing through the hole. The endcap may also be shaped to allow it to be used at various lancing sites on the body without changing the endcap.
